Spring is upon us, and over the next few weeks the City of Westfield will be activating the decorative fountains that are located within parks throughout the city. All city fountains use recycled water in their process. There is an initial charging of the fountain's system, but after that they are self-sustaining. In addition, to save on long term maintenance costs, it is important to run the fountains to keep them in proper working order.

Any questions or concerns may be directed to the Water Department, 572-6226.
